Project 2 Proposal

Project Goal:
The goal of the project is to give the user a chance to experience music and visuals simultaneously to invoke a sense of art in a medium that is more technological than it is artistic.

Objectives:
1) Contain music
2) Contain images
3) Incorporate them in a way that they can both be experienced simultaneously

Target audience:
Anyone that appreciates music and digital imaging/photography as art. Age, sex, and race are all insignificant.

Rationale
1) Participants would want to interact with this piece because the work that they put into using the site (navigating, clicking, reading, etc) will be well worth the payoff of being able to experience good art.
2) This project will address the needs of the students by giving them a minimal amount of buttons to have to press in order to operate the web site.
3) I want to build this website because I feel like it would be a good artistic expression for me.

Overview
This web site’s intention is to be a showcase of art/photography and music. It will be created with xhtml, css, and possibly some xml. The long term goals of this project are the same as the short term goals.
